

#### ePrescribing in a Global Digital Exemplar

<u>Salford's Lessons Learnt and Future Challenges for ePrescribing and Meds</u> <u>Admin (ePMA) within an Integrated Care Organisation</u>

Lindsay Harper – Director of Pharmacy, Salford Royal NHS Foundation Trust

#### ePMA Team

Neil Kirby – EPR Pharmacist Laurence Josephson – EPR and Clinical Pharmacist Natalie O'Brien – EPR Pharmacy Technician

#### What we'll cover...

- Salford Royal (SRFT) ePMA 'history' and 'where we are at'
- Lessons learnt
  - Basic implementation lessons
  - Ongoing challenges
  - Maintenance
  - Clinical Decision Support
- Future challenges
- Risks / opportunities

### SRFT EPR History

- c.800-bedded teaching hospital & Integrated Care Organisation
  - Specialities include: renal; dermatology; nutrition; neurosurgery; also regional trauma unit
  - Many offsite services (e.g. anticoagulation; dermatology)
  - Intermediate Care Centres
- Whole-site EPR since August 2000
- Current, core product: Allscripts Sunrise
- Currently implemented functionality includes:
  - Pathology & radiology ordering for all IP/most OP sites
  - Associated results / Images via CRIS
  - Free text & structured noting (inc. voice recognition)
  - All wards included (Critical Care, ED & Post-Op Theatre)
- Scanned records
- SIR (Salford 'spine')

### SRFT ePMA History

- ePMA is an embedded function within EPR
  - Locally built & maintained catalogue (still!)
- Discharge summaries with discharge meds rolled out 2002.
- ePMA piloted 2008, rolled out 2010
  - Essentially replacement of standard Kardex
  - Not yet included: Fluids; PN; Complex infusions; CDS alerts.
- Critical care incorporated early 2011
- ED (inc. paediatric ED) incorporated 2014
- OP chemotherapy early 2015
- IP chemotherapy currently rolling out

### Basic Implementation Lessons (1)

- Need strong support & engagement from
  - Trust boards
  - Medicines Management and Medicines Safety Groups
  - Consultants (and relevant clinicians) willing and prepared to commit
- Need permanent, dedicated, Pharmacy staff integrated with IM&T/EPR departments
  - Currently: 1.5 Pharmacists; 1 Technician
  - Still not enough!
- Need clear mechanism for workload priorities

### Basic Implementation Lessons (2)

- Prescribers love 'pre-built' prescriptions
- Prescribers love ordersets
  - Specialty specific: ED; Paediatric; Anaesthetic & Haematology
  - Indication specific: Antibiotics
- Entering information is easy, following up is less so
  - e.g. Medicines Reconciliation issues

#### Ongoing Challenges (Lessons Being Learned!)

- Emergency department (NB now "live")
  - Whole department project
  - Workflow is critical
  - Admission issues (not uncommon)
- IV chemotherapy
  - National pressures vs. local priorities
  - Integrated EPR solution vs commercial products
- Fluid prescribing
  - Association with fluid balance
- Dialysis
  - Multiple inpatient visits
- Intermediate care
  - Transfer vs. Discharge
- Cont'd...

### Maintenance

- Basic medication catalogue
  - New medicines
  - New ordersets
  - Updated default dose information, frequency, routes of administration etc.
- MHRA / NICE / BNF guidance & warnings
- Local policies / updates
  - via Medinces Safety or Medicines Management
     Groups
  - Local adverse events

### Clinical Decision Support

- Requires full, committed, resource for management, maintenance and review
- UK compliance
  - dm+d
  - UK references; data & warnings
- Update frequency
- Major issues regarding prescribers interaction with alerts (e.g. 'alert fatigue')
- May loose subtleties of local messages and warnings with commercial product

### Future Challenges

- ePMA is not an end in itself. It is part of the larger system
  - Helps with standardisation of treatment protocols
  - Build into electronic treatment pathways
- Automation and integration
- GS1 compliance
- Closed-loop prescribing

### Risks / Opportunities

- How can we meet these challenges?
  - Increase in skilled, pharmacy EPR workforce
  - Better networking for EPR Pharmacy staff
- EPR Pharmacist as a career role?
- Impact of
  - hospital mergers
  - increased joint working
  - Integration of acute and community services

# Many thanks
