Challenges for healthcare systems internationally

- * Spiralling healthcare costs
- * Ageing populations
- * Increasing numbers of people living with long-term conditions
- * On-going concerns about the safety, quality and inefficiency of healthcare

Drug blunder patient dies

Wayne Jowett in a photo released by his family

A teenager has died after a cancer drug was injected into his spine by mistake at a Nottingham hospital.

The leukaemia treatment vincristine should have been injected into 18-year-old Wayne Jowett's vein.

Managers at Queen's Medical Centre launched an inquiry into the blunder. Two junior doctors have been suspended.

Wayne had been

► The BBC's Daniel Sandford

"The incorrect use of the drug vincristine has killed before"

real 56k

► The BBC's Chris Mills

"There have been a number of these incidents over the past ten years"

“
My clients have been appalled to learn that so many other families have suffered as a result of similar mistakes

ePrescribing systems

“The utilisation of electronic systems to facilitate and enhance the communication of a prescription or medicine order, aiding the choice, administration and supply of a medicine through knowledge and decision support and providing a robust audit trail for the entire medicines use process” (NHS Connecting for Health)

Anticipated benefits: patient safety, clinician benefits, service benefits

PINCER TRIAL

Simple feedback

+

Pharmacist intervention
(2 days per week for 12 weeks)

Outcome measure	Simple feedback	Pharmacist intervention	Odds ratio (95% CI)	P-value
Patients aged ≥ 18 with a history of peptic ulcer prescribed an NSAID	86/2014 (4.3%)	51/1852 (2.8%)	0.58 (0.38, 0.89)	0.01
Patients ≥ 18 with asthma prescribed a beta blocker	658/22224 (3.0%)	499/20312 (2.5%)	0.73 (0.58, 0.91)	0.006
Patients ≥ 75 on long-term ACE inhibitors or loop diuretics with no U&E in the previous 15 months	436/5329 (8.2%)	255/4851 (5.3%)	0.51 (0.34, 0.78)	0.003

But implementing technology into the NHS is not straightforward...

- * Complex changes to organisation functioning and individual work practices
- * Often highly political as public money
- * Importance of evaluations

Daily Mail COMMENT

VASTLY expensive, utterly unfit for purpose, the NHS computer scheme will go down in history as the most egregious of countless examples of the last Labour Government's incompetence and waste. It was only our money, after all. How bitterly telling it is that the £12billion ministers squandered on this vanity project is exactly the size of the black hole identified this week in the Chancellor's deficit reduction plan. And how starkly this saga underlines yesterday's rare moment of insight from Nick Clegg, when he told delegates at the Lib Dem conference: 'Never, ever, trust Labour with our economy again.'

Our national evaluation of the NHS Care Records Service

“Implementation of the NHS Care Records Service in “early adopter” sites proved **time consuming and challenging**, with as yet **limited discernible benefits** for clinicians and no clear advantages for patients....The move to **increased local decision making** that we advocated based on our interim analysis has been pursued and welcomed by the NHS, but it is important that policymakers do not lose sight of the overall goal of an **integrated interoperable solution.**”

Source: Sheikh A et al. Implementation and adoption of nationwide electronic health records in secondary care in England: final qualitative results from a prospective national evaluation in "early adopter" hospitals. *BMJ* 2011;343:d6054

Investigating the implementation of ePrescribing systems into NHS hospitals

Aims:

- * To describe and understand the procurement, implementation, adoption and maintenance processes involved with introducing ePrescribing systems.
- * To estimate their effectiveness and cost-effectiveness.
- * To develop best practice recommendations and a toolkit for their successful integration into NHS hospitals.

Key aims for the day

Above all – networking and sharing experiences

- *For planned/new implementation – what to choose, how do you use it, why do you want it?**
- *For those with existing ePrescribing systems – what can you learn from or share with others?**
- *For the NHS – how can the benefits be maximised and the risks minimised?**
