

# ePrescribing drug trolley's top tips!

- 1. Put your ward area's common used drugs in the top shelf e.g. antibiotics, analgesia & your ward specific speciality drugs.**
- 2. Think about your ward processes – e.g. clexane is just used at 6pm, so put in bottom drawer and put on top of trolley for this round.**
- 3. Create a laminated list of the drugs (per drawer) on each trolley-so you can find out what drawer the drug is in before you go looking for it.**
- 4. Ensure your trolley is in good working order.**
- 5. When pushing the trolley ensure the screen is at the side so you have a good view in front of you.**
